1.3.1 Windows Concepts

By Clement Chan

Recent is **better**.

Windows has become much more secure over time and has added more features and functionality

Windows plans for **Windows 10** to be the *last version*; they will constantly supply updates for Windows 10, rather than make a new “version”

Windows Users

Types of Users
High level categorization

Local users:

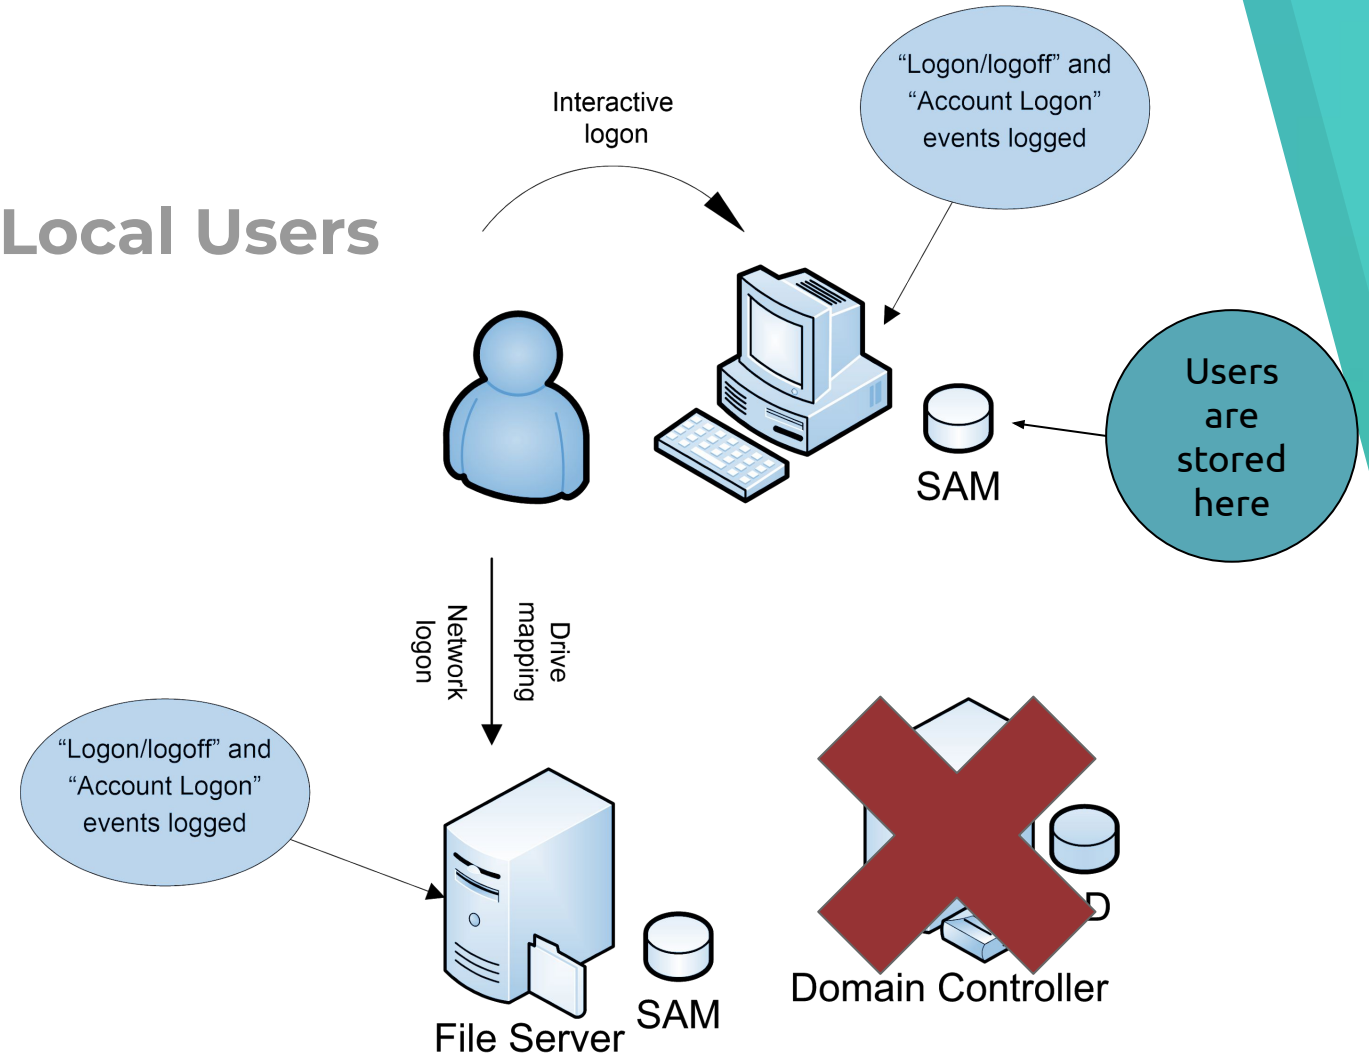

users stored in a computer are used to log in

Domain users:

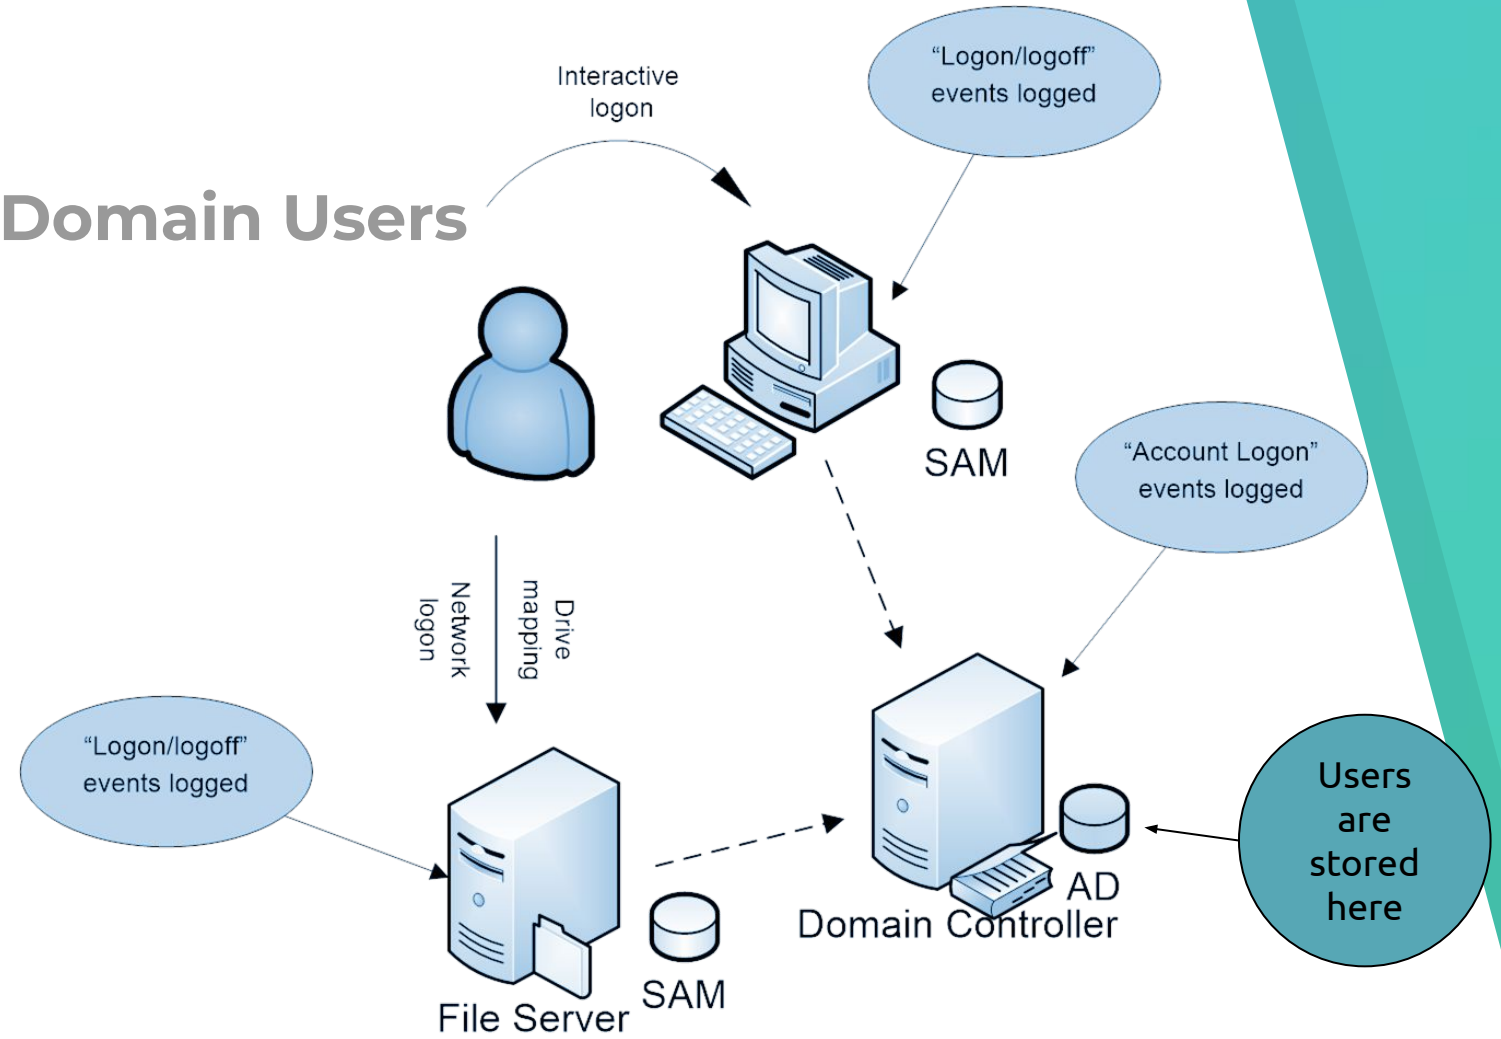

users that belong to a domain, can be used to log in to anything in a domain

Local Users

Interactive logon
"Logon/logoff" and "Account Logon" events logged
SAM
Users are stored here
Network logon
Drive mapping
"Logon/logoff" and "Account Logon" events logged
File Server
SAM
Domain Controller

Domain Users

Types of Users
Lower level grouping

Administrators:

users with administrative privileges, can do most tasks

Users:

users that can log into the computer

Remote Desktop Users:

users that can remote desktop into the computer (explained later)

There are many other groups that users can be in. These groups grant users specific permissions.

MMC - the digital toolbox

Microsoft Management Console

sysadmin’s toolbox

snap-ins = tools to configure computer

Opening **MMC**

Windows Search “mmc”

Win+R “mmc”

With MMC, you can configure users, scheduled tasks, security policy, and more

We will explore it soon!

THE END
