*does not guarantee scores of Linux and Cisco

Not actually available.

No, not those services

Services:

computer programs that operates in the background

Examples:

DNS Client
Parental Controls
Windows Firewall

How many services are there?

A LOT

Features

Some services are installed on Windows through features.

You may have to uninstall unnecessary features to remove these services.

Service States

Automatic

Service starts up automatically on Windows boot

Manual

Service starts whenever it is called

Disabled

Service cannot start until manually set to Automatic or Manual

Examples

Automatic

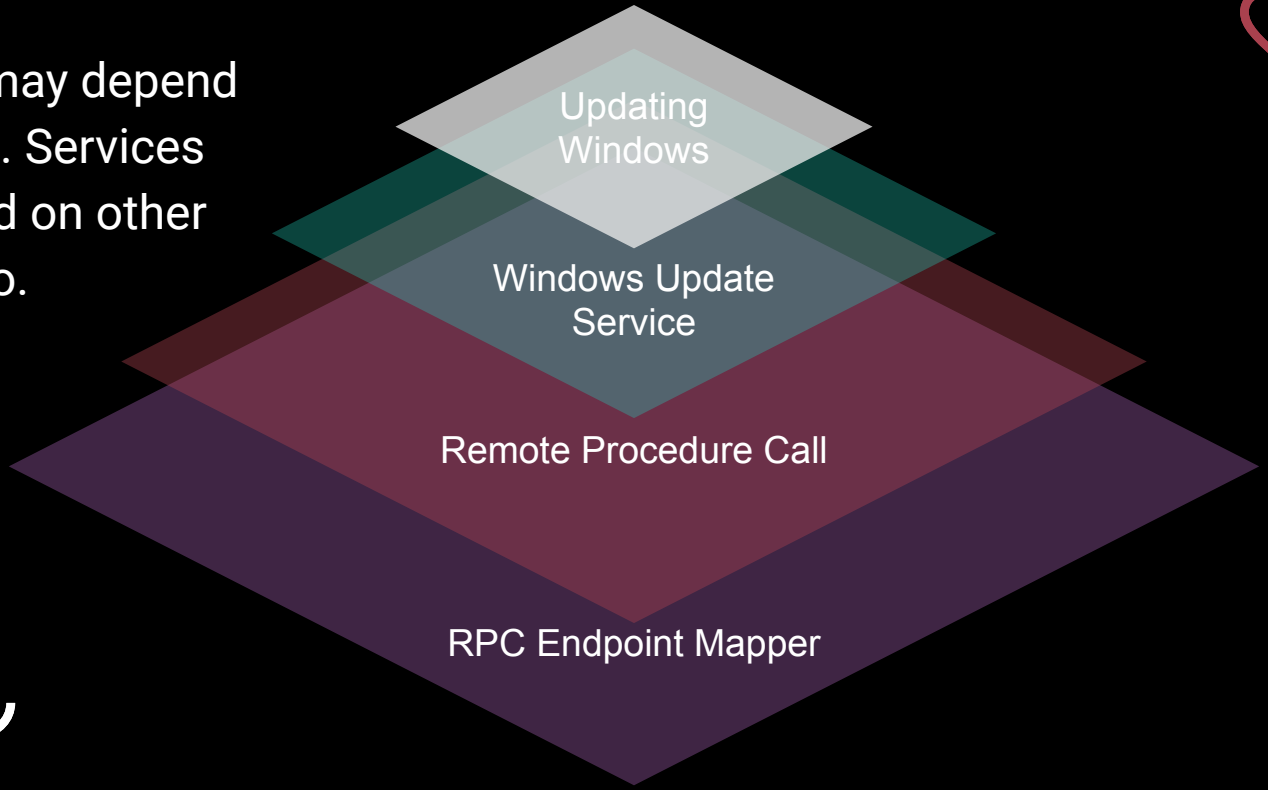

Windows Firewall
Windows Update
Windows Defender

Disabled

IP Helper
SNMP Trap
MOST remote services
RPC is necessary
Server (if not needed)*
Scorpio requires the Server service

Dependencies

Programs may depend on services. Services may depend on other services too.

Configuring services

- mmc > Services snap-in
- Win+R > services.msc

- Go to the service of your choice and double-click
  - Set to the startup setting you desire, and **start/stop** if needed

Let’s take a look at Services

On your lab VMs, launch Services

What is the shortcut?

Let’s have a look at all the services on your lab VM

Note that your VM and your host computer have a slightly different list of services - this is because the services your computer has depends on the computer itself, with its installed programs and such
