

Powershell vs. Batch

Why Batch Bad

- limited only to Batch commands
- has to run scripts in sequence
- not as easily readable
- cannot put a bunch of scripts together
- only command prompt commands with some conditionals
- doesn’t support linux

Why Powershell Better

- can run batch scripts
- can do both powershell and batch/command prompt commands
- has access to more complex commands
- good for more complex scripts
- has aliases = name methods and scripts
- cmdlets make it more readable
- support linux
