

Powershell vs. Batch

What is Powershell ISE

- Powershell but GUI
- test, debug, and write scripts with user interface
- colorful to make it easy to read

Why Powershell ISE Better

- insert blank space below current line
  - shift + enter
- selective execution
  - F5 or run script
- ctrl + v option unlike powershell
- pressing F8 gives multiple options to edit line
- context sensitive helper will suggest best related code
  - type Invoke-Item + F1

How to use terminal

- shows powershell terminal to show results
  - can type in powershell/command prompt commands
- scripting tab
  - create your scripts
  - color coding
- search for command on the right
  - modules for related commands
  - search for specific commands

How to use debug terminal

- if cannot run scripts
  - type set-ExecutionPolicy unrestricted
  - need to save script first
- can create breakpoints
  - script will stop at those breakpoints
- can type continue to keep going
- step out
  - ignore breakpoints
- step into/step over
  - continue into next step

How to use Command Search

- choose a module
  - will give you related commands
- click on one there
  - will have parameters
- Get-Service
  - want to look for IP Helper
  - go to name type in “IP Helper”
  - insert and run

How to write scripts

- click new script
- typescript
- write-host “Hello there General Kenobi”
  - once you type write PS ISE will show predictive commands
- click save script and save it to a known location
- can click open script to reopen the saved script file
