

5.0 Misc Settings

1.
Autoplay

What is Autoplay

- Automatic action that takes place when a media device is recognized by the computer

Setting autoplay

Autoplay should be disabled

Prevents the possibility that hackers can run malware by simply inserting a USB stick

2. Windows Firewall In Depth

There’s more to firewall than meets the eye

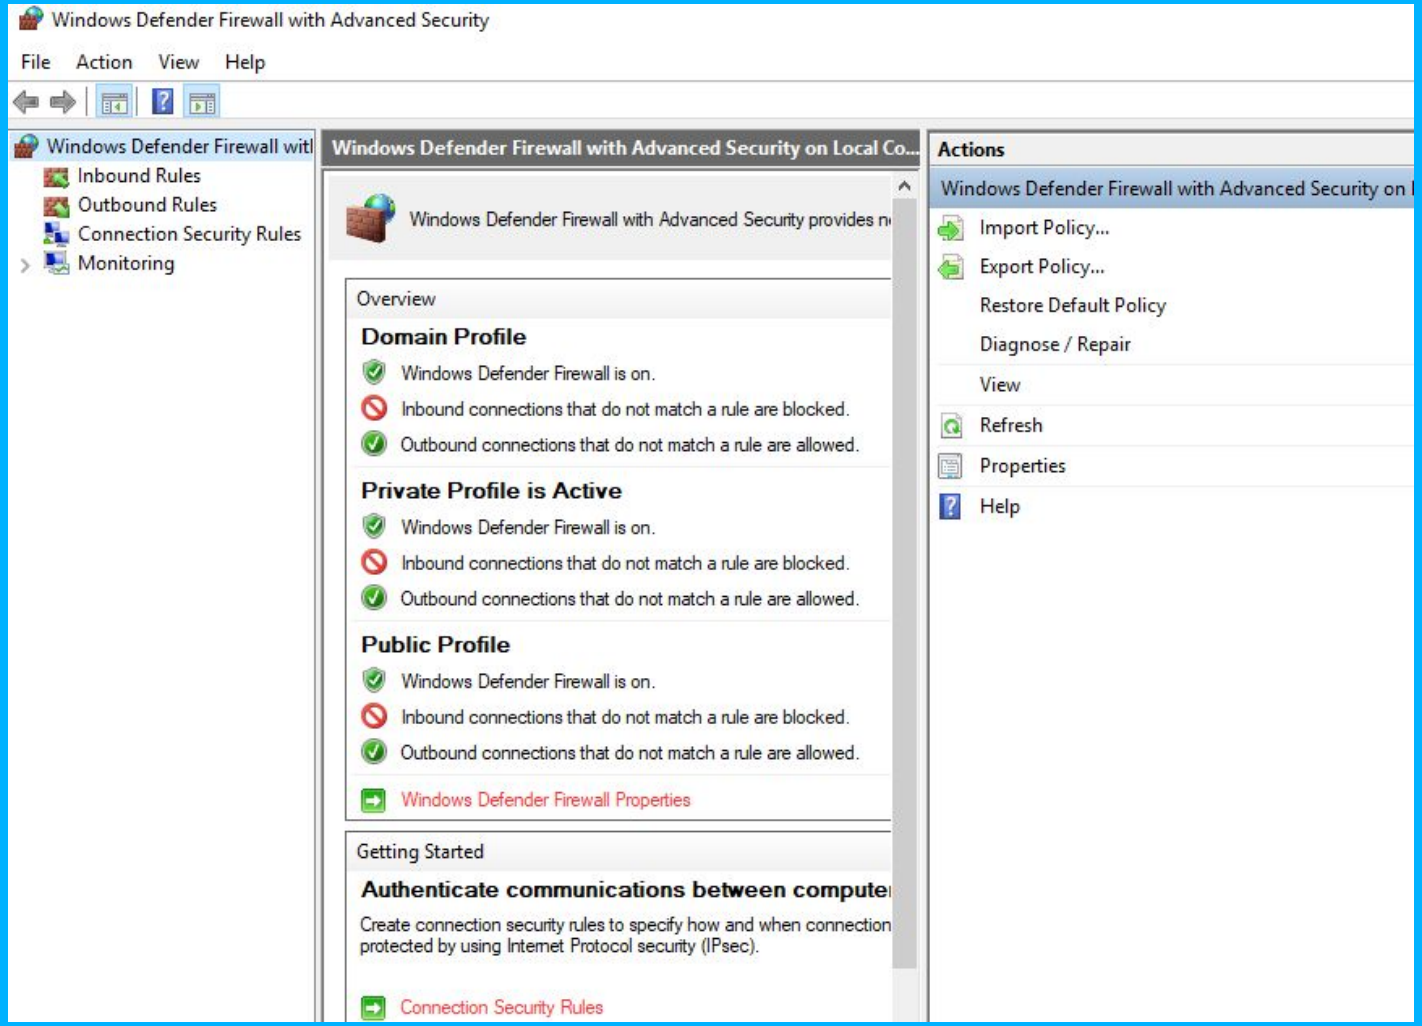

Windows Firewall with Advanced Security

Win + R “wf.msc”

Firewall has three profiles

- ➜ Domain
- ➜ Private
- ➜ Public

Each holds different “rules” that are put into effect based on your computer’s network settings

Domain, Private, Public

All three profiles should be enabled.

Domain profile - computer is in domain network

Private profile - computer is in private wifi (typically home wifi)

Public profile - computer is in public wifi (typically coffee shops, libraries, etc)

When connecting to new wifi, you usually specify whether it’s private or public wifi

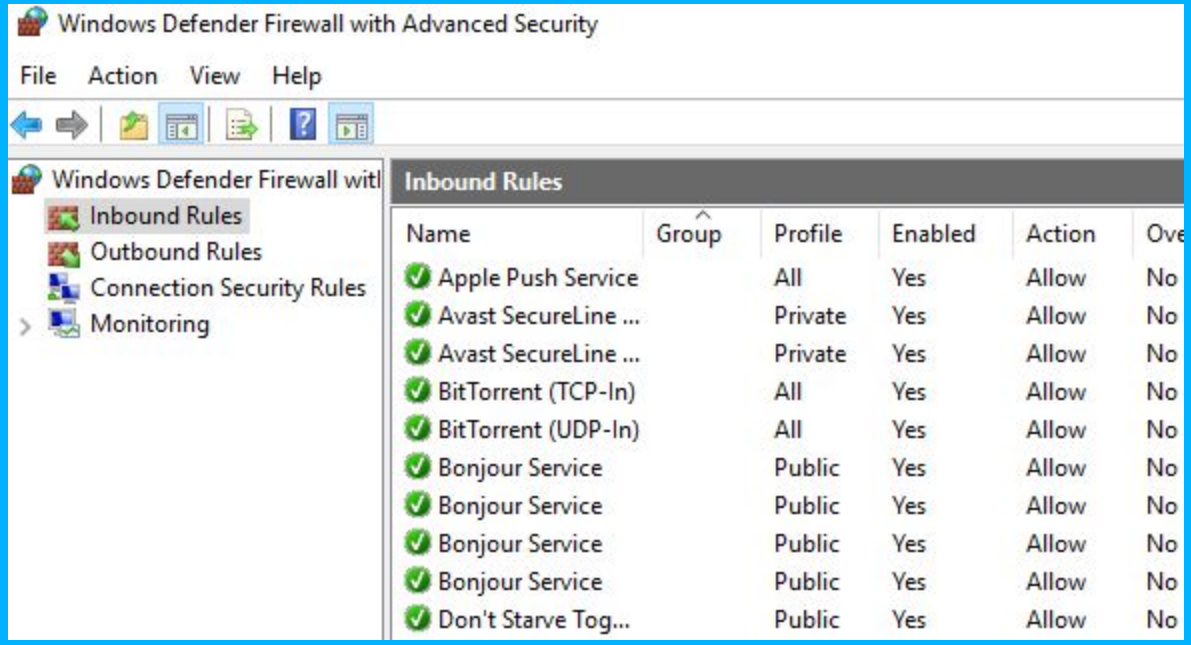

What are rules?

Rules are filters

They can filter traffic coming in or out of your computer based on certain properties such as:

- ➜ Port
- ➜ Program
- ➜ Source address
- ➜ Destination address

Types of Rules

Inbound rules - filtering for incoming packets

Outbound rules - filtering for packets going out

Inbound rules are usually more important

More on incoming vs outgoing

Preventing incoming is obvious - you don’t want bad stuff going in the computer

Preventing outgoing will result in less leakage of information

- ➜ Malware sending out info
- ➜ File transfer of confidential documents out remotely

What to do here?

Servers will need to have their ports open (unfiltered/allowed by a rule)

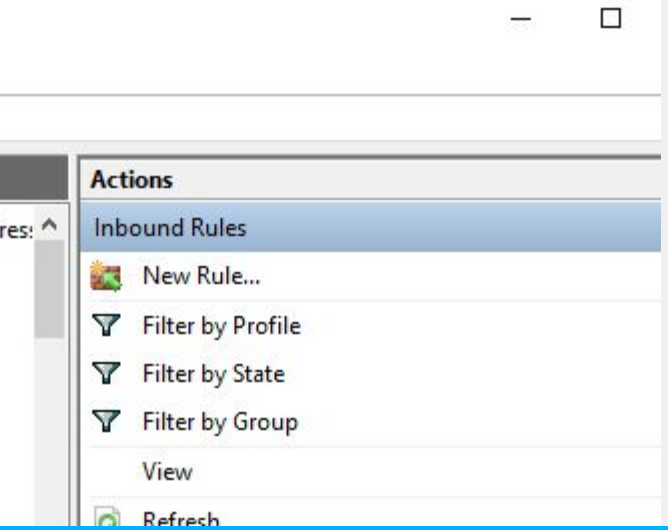

Suspicious programs/ports/locations should not be allowed

Allowing port 80/TCP (example)

To allow port 80/TCP (HTTP communications as web server):

1. Select New Rule…
2. Select the Port rule type
3. Choose the specific port 80 under TCP
4. Allow connection
5. Have it apply to all profiles
6. Give the rule a name

What type of rule would you like to create?

- **Program**
  Rule that controls connections for a program.
- **Port**
  Rule that controls connections for a TCP or UDP port.
- **Predefined:**
  AllJoyn Router
  Rule that controls connections for a Windows experience.
- **Custom**
  Custom rule.

Does this rule apply to TCP or UDP?

- **TCP**
- **UDP**

Does this rule apply to all local ports or specific local ports?

- **All local ports**
- **Specific local ports:** 80
  Example: 80, 443, 5000-5010

What action should be taken when a connection matches the specified conditions?

- **Allow the connection**
  This includes connections that are protected with IPsec as well as those are not.
- **Allow the connection if it is secure**
  This includes only connections that have been authenticated by using IPsec. Connections will be secured using the settings in IPsec properties and rules in the Connection Security Rule node.
  Customize...
- **Block the connection**

When does this rule apply?

- **Domain**
  Applies when a computer is connected to its corporate domain.
- **Private**
  Applies when a computer is connected to a private network location, such as a home or work place.
- **Public**
  Applies when a computer is connected to a public network location.

Name:

Description (optional):

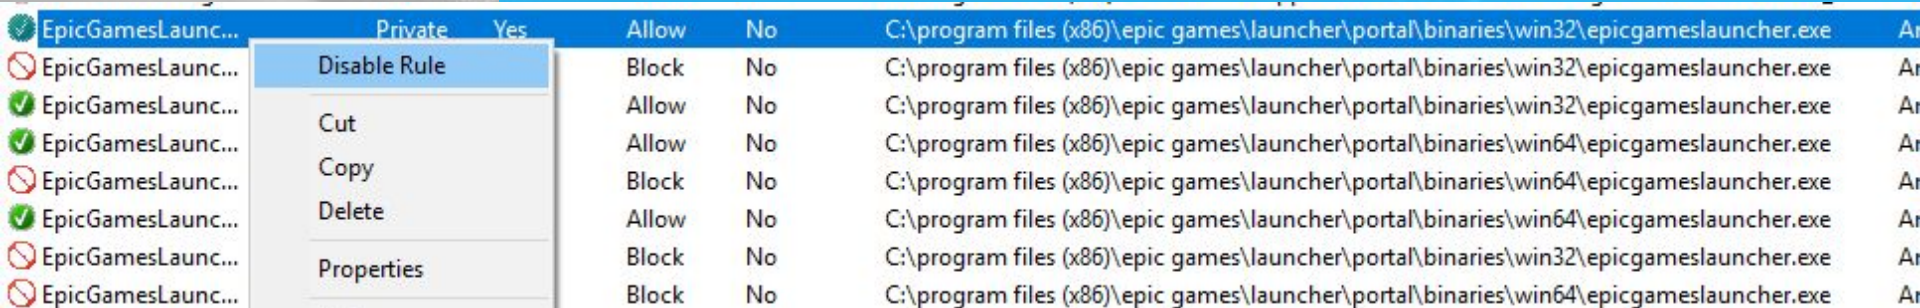

Removing a rule

Right-click

➜ Disable rule

➜ You can also delete the rule too

Below will prevent communications via epicgameslauncher.exe in the private profile

Thanks!

Any questions?

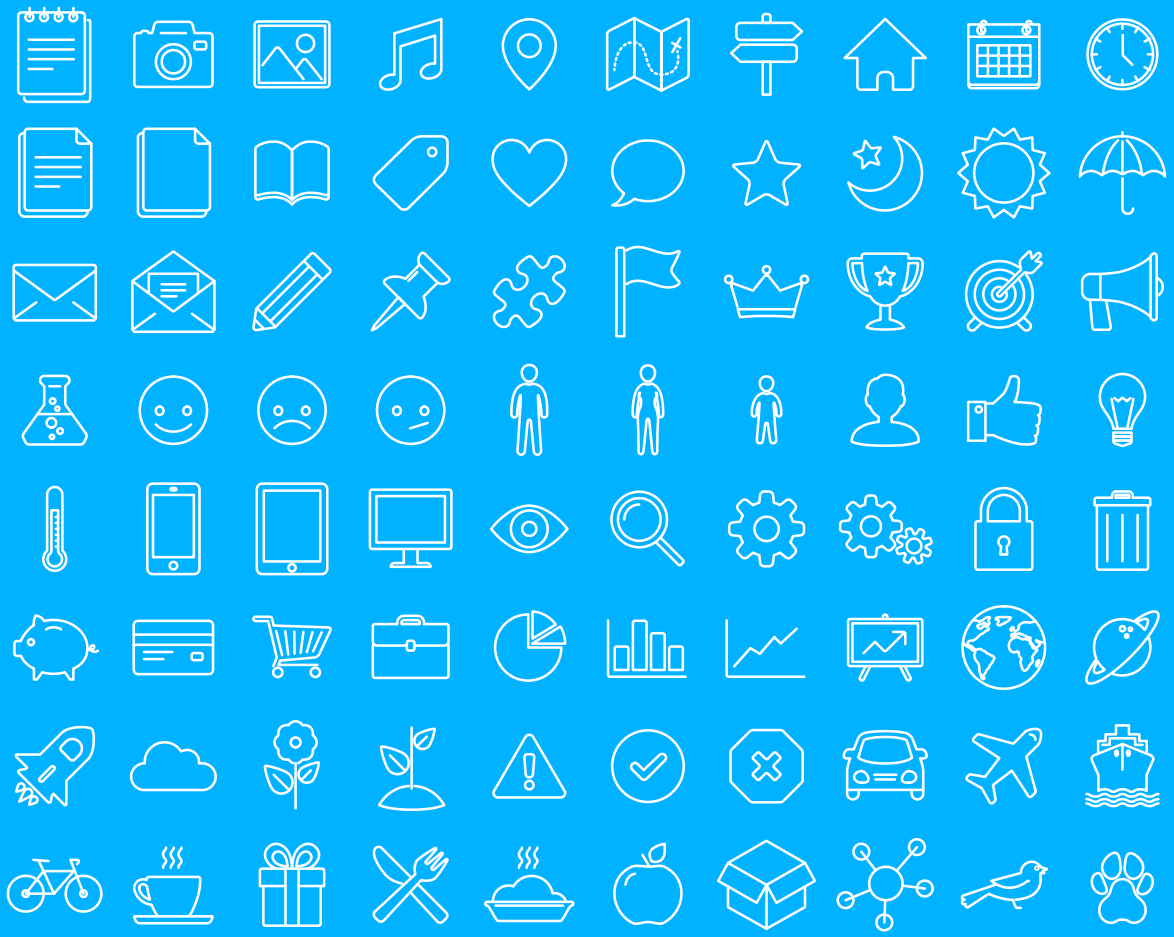

CREDITS

Special thanks to all the people who made and released these awesome resources for free:

- ➜ Presentation template by SlidesCarnival
- ➜ Photographs by Death to the Stock Photo (license)

SlidesCarnival icons are editable shapes.

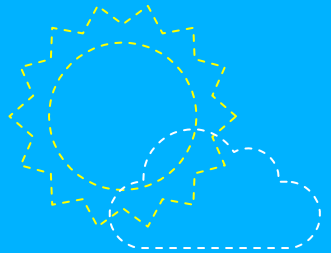

This means that you can:

- Resize them without losing quality.
- Change line color, width and style.

Isn't that nice? :)

Examples:

Now you can use any emoji as an icon!
And of course it resizes without losing quality and you can change the color.

How? Follow Google instructions
https://twitter.com/googledocs/status/730087240156643328

and many more...
