

Updates 😂😂😂

Don't turn off your computer, this will take forever

Apologies for this slide, I'm done

Why updates?

- Despite the fact that updates are notoriously slow, you must take into consideration the positives of updating

Positives of Updating

- Waiting for hours
- Computer reverts changes on you unexpectedly
- You get the BSOD

Actual Positives of Updating

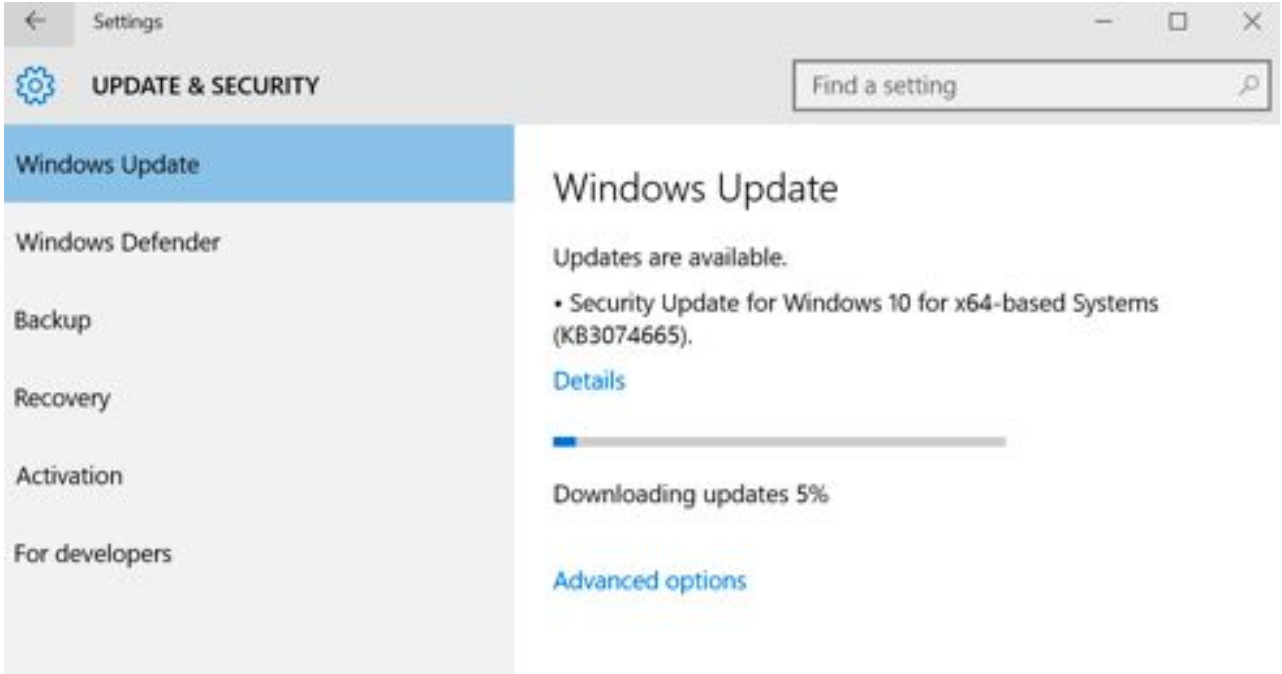

Legit why you should update

- Keep up to date with patches for bugs that could potentially break your system or let hackers in

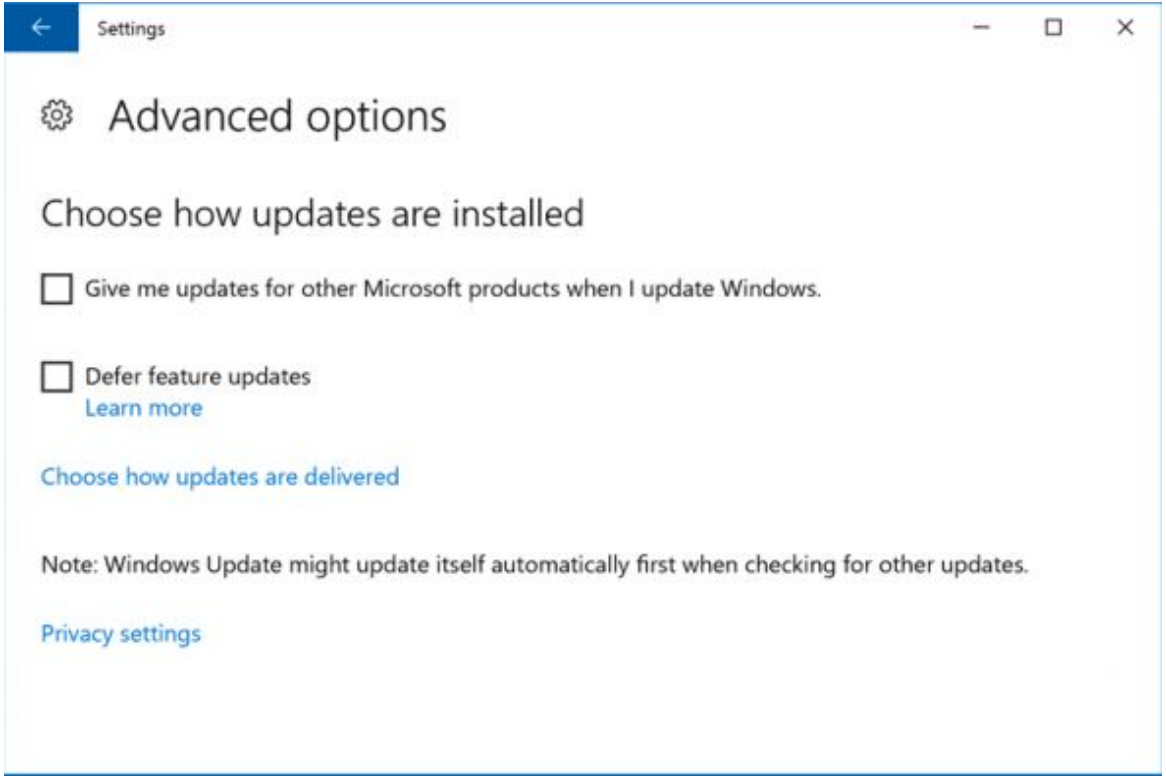

Updating Windows 10

- “Windows Update” in the search bar
- Settings -> Update & Security
- Updates are always automatic in Windows 10

Windows 10 Update GUI

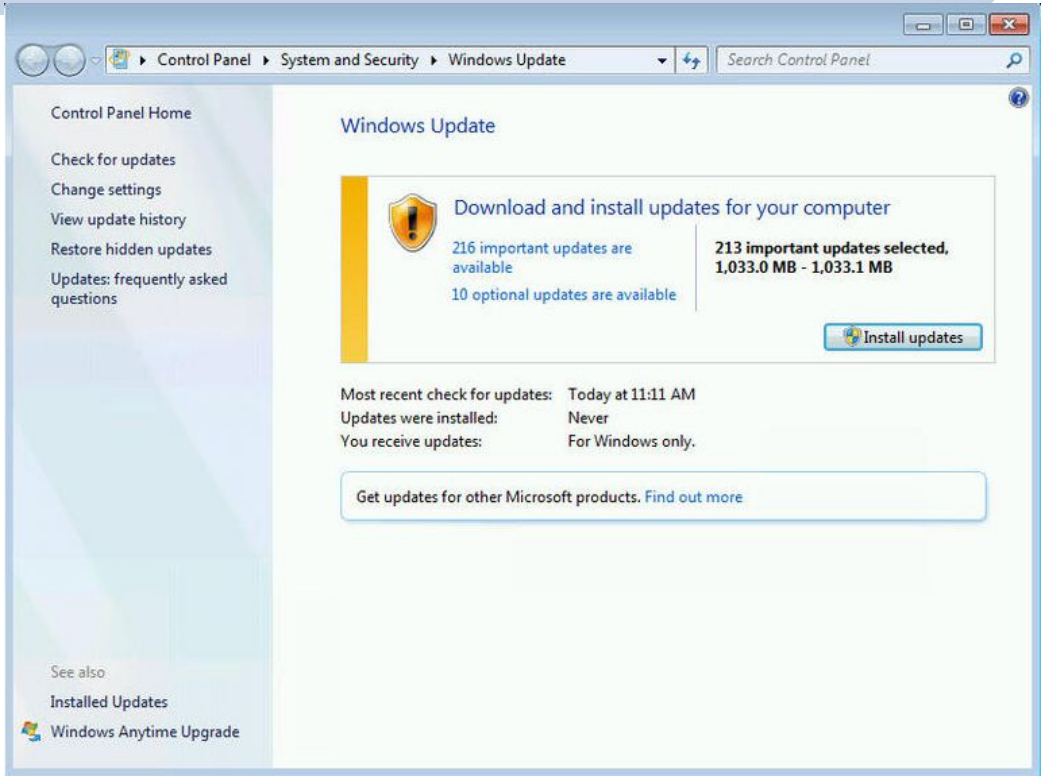

Windows 10 Update Settings

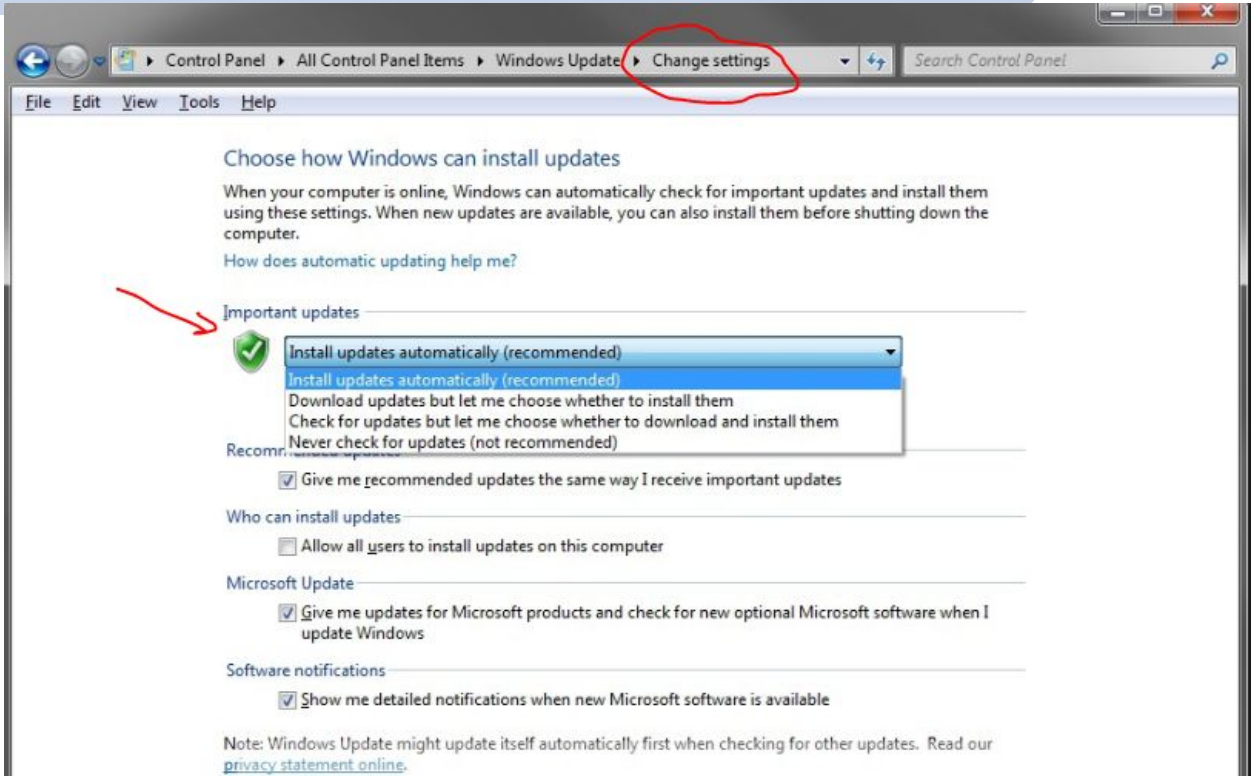

Updating Pre-Windows 10

- “Windows Update” in the search bar
- Click on “Check for updates”
- You need to manually set for automatic updates
- May need to download service packs, depending on version

Windows <10 Update GUI

Windows <10 Update Settings

There are many updates

- Patch - update
- Service Pack - group of patches
- Hotfix - file(s) that fix software problem

If Service Pack breaks your computer

spuninst.exe

- rarely used though, most of the time it’s fine

Application Updates

Where to update apps

- Google search

Might need to remove the older version first before installing

Some programs don’t have installers; you’ll need to extract a zip, build your installer using a supplied script, and run the installer

App Update - BEWARE

For some programs, you should not remove critical configurations or data that are essential to whatever function your computer serves. It is never a bad idea to **backup the program folder** before you start updating.
