

File Management

Showing Hidden Files

- Hidden Files
  - View tab
    - Show hidden files and folders
    - Uncheck “hide protected operating system files”

Delete Sketchy Files

- Any unauthorized media files
- Any txt files that say “credit cards” or “password” etc.
- Check program files for things that aren't in programs and features
- Use Ultrasearch
  - https://www.jam-software.com/ultrasearch/

Shared Files

- Win+R -> Fsmgmt.msc -> shares
- Default shares are:
  - ADMINS$
  - C$
  - IPC$
- Remove all other shares unless they're specified

File Permissions

- Right click on a folder or file -> properties -> Security
- Only needed to be done when specified to do so

Practice Time!

Look for unauthorized files on your system. There are three of them. (Not talking about malware here, just regular files that shouldn't be on the system)
